Commissioning for Diabetes and Eye Services

Supporting, Improving, Caring

July 2011
Commissioning Diabetes and Eyes Services

NHS Diabetes would like to thank the following for their advice and contribution to the development of this commissioning guide:

Peter Scanlon  Consultant Ophthalmologist/Programme Director, English National Screening Programme for Diabetic Retinopathy
Fionna O'Leary  National Programme and Quality Assurance Manager, English National Screening Programme for Diabetic Retinopathy
Esther Provins  National Informatics Lead, English National Screening Programme for Diabetic Retinopathy
Clare Bailey  Consultant Ophthalmologist/ Chair of the Quality Assurance Group , English National Screening Programme for Diabetic Retinopathy
John Sparrow  Consultant Ophthalmologist, Connecting for Health, National Clinical Lead for Ophthalmology
Sue Cohen  National Quality Assurance Director, English National Screening Programme for Diabetic Retinopathy
Thomas Wilson  Director of Contracting and Performance, NHS Thameside and Glossop
Bridget Turner  Diabetes UK

And to Thoreya Swage who wrote this publication

Commissioning for Diabetes and Eye Services

The NHS Diabetes commissioning approach helps to deliver high quality integrated care through a three-step process that ensures key elements needed to build an excellent diabetes service are in place. The approach is supported by a wide range of proven tools, resources and examples of shared learning.

**Step 1** – involves understanding the local diabetes population health needs by developing a local Health Needs Assessment and setting up a steering group with key stakeholder involvement including a lead clinician, lead commissioner, lead diabetes nurse and lead service user.

**Step 2** – involves the development of a service specification to describe the model of care to be commissioned. This becomes the document on which tenders may be issued.

**Step 3** – involves monitoring the delivery of the service specification by the provider and evaluating the performance of the service. Input from the steering group with service user representation will be an important mechanism for monitoring the service as well as patient surveys.

This commissioning guide has been developed by NHS Diabetes with key stakeholders including clinical and social services professionals, the English National Screening Programme for Diabetic Retinopathy and patient groups represented by Diabetes UK.

It is not designed to replace the Standard NHS Contracts as many of the legal and contractual requirements have already been identified in this set of documents. Rather, it is intended to form the basis of a discussion or development of diabetes and eye services between commissioners and providers from which a contract for services can then be agreed.

This commissioning guide consists of:

- A description of the key features of high quality diabetes and eye care
- A high level intervention map. This intervention map describes the key high level actions or interventions (both clinical and administrative) diabetes and eye services should undertake in order to provide the most efficient and effective care, from admission to discharge (or death) from the service.

It is not intended to be a care pathway or clinical protocol, rather it describes how a true ‘diabetes without walls’ service should operate going across the current sectors of health care.

The intervention map may describe current service models or it may describe what should ideally be provided by diabetes and eye services.

- A diabetes and eye services contracting framework that brings together all the key standards of quality and policy relating to diabetes and eye care
- A template service specification for diabetes and eye services that forms part of schedule 2 part 1, or section 1 (module B) of the Standard NHS Contract covering the key headings required of a specification. It is recommended that the commissioner checks which mandatory headings are required for each type of care as specified by the Standard NHS Contracts.

Commissioners are referred to the English National Screening Programme for Diabetic Retinopathy for details on how to commission diabetic retinopathy screening services – see www.retinalscreening.nhs.uk/commissioning
For further detail on how to approach the commissioning of diabetes services please see http://www.diabetes.nhs.uk/commissioning_resource

Features of Diabetes and Eye Services

High quality diabetes and eye services should have:

- systems to manage the call and recall of people with diabetes who require regular retinopathy screening
- a process to screen for diabetic eye disease, e.g. retinopathy, maculopathy and cataracts
- a process to screen for diabetic eye disease for pregnant women with diabetes, including those with gestational diabetes
- a specialist service to treat diabetic eye disease
- regular monitoring of people with diabetes who have had retinopathy identified.

In addition, the services should:

- be developed in a co-ordinated way, taking full account of the responsibilities of other agencies in providing comprehensive care and placing users at the centre of decisions about their care and support - "no decision about me without me" (Equity and Excellence: Liberating the NHSi).
- be commissioned jointly by health and social care based on a joint health needs assessment which meets the specific needs of the local population, using a holistic approach as described by the generic model for the management of long term conditionsii
- provide effective and safe care to people with diabetes in a range of settings including the patient’s home, in accordance with the NICE Quality Standards for Diabetesiii
- deliver the outcomes for diabetes as determined by the NHS Outcomes Frameworkiv
- take into account the emotional, psychological and mental wellbeing of the patientv
- take into account race and inequalities with respect to access to care
- ensure that services are responsive and accessible to people with Learning Disabilitiesvi
- have effective clinical networks with clear clinical leadership across the boundaries of care which clearly identify the role and responsibilities of each member of the diabetes healthcare team
- ensure that there are a wide range of options available to people with diabetes to support self management and individual preferences
- take into account services provided by social care and the voluntary sector
- provide patient/carer/family education on diabetes not only at diagnosis but also during continuing management at every stage of care
- provide education on diabetes management to other staff and organisations that support people with diabetes
- have a workforce that has the appropriate training, updating, skills and competencies in the management of people with diabetes

---

• provide multidisciplinary care that manages the transition between children and adult services and adult and older peoples’ services
• have integrated information systems that record individual needs including emotional, social, educational, economic and biomedical information which permit multidisciplinary care across service boundaries and support care planning
• produce information on the outcomes of diabetes care including contributing to national data collections and audits

• have adequate governance arrangements, e.g. local mortality and morbidity meetings on diabetes care to learn from errors and improve patient safety
• take account of patient experience, including Patient Reported Outcomes Measures, in the development and monitoring of service delivery
• actively monitor the uptake of services, responding to non

Diabetes and eyes intervention map
Introduction
This contracting framework sets out what is required of clinically safe and effective services that are providing eye care for people with diabetes. The framework is designed to be read in conjunction with the high level patient intervention map, which describes the interventions and actions required along the patient pathway as well as entry and exit points and the standard service specification template for diabetes and eyes services.

Commissioners are also referred to guidance on ‘Commissioning Systematic Diabetic Retinopathy Screening’ published by the English National Screening Programme for Diabetic Retinopathy for further details on commissioning retinopathy screening services.

The framework brings together the key quality areas and standards that have been identified by NHS Diabetes, Diabetes UK, the English National Screening Programme for Diabetic Retinopathy, the Royal Colleges and other related organisations.

The principles that establish a safe pathway for patient care
Establishing the principles that underpin the systems and processes of pathways for patient care leads to more efficient patient throughput and can reduce risk of fragmentation of care and serious untoward incidents. The principles operate at four layers within a patient pathway:
- commissioning
- clinical Case Direction or the overall Care Plan (i.e. the management of an individual patient)
- provision of the clinical service or process
- organisational platform on which the clinical service or process sits (the provider organisation)

A straightforward or simple pathway is one in which the overall management, including both clinical case direction and the delivery of the clinical processes, conventionally sits within one organisation. However, with a more complex pathway, there is a danger that fracturing the overall management pathway into components carried out by different clinical teams and organisations will require duplication of effort leading to inefficiency and increased risk at handover points. This can be managed by establishing clear governance arrangements for all the layers in the pathway.

In addition, Commissioning Bodies must balance the benefits of fracturing the pathway against increased complexity and ensure that the increased risks are mitigated.

The governance arrangements required for all three layers and the commissioner responsibilities are shown below:
In essence, at each level, there are governance arrangements to ensure sound and safe systems of delivery of patient care with clear lines of accountability between each level.

**The diabetes and eye services.**

The key principle of good diabetes and eye care is to provide a high quality service that is reliable in terms of delivery and timely access for patients requiring that care.

Diabetes eye care is provided by a number of different teams in the primary, community and acute settings. It is essential that there is coordination of care of the patients through the care planning process and a consultant ophthalmologist retains the clinical accountability and responsibility for the services. Responsibility for overall patient care across the whole pathway rests with the patient’s GP who also retains overall responsibility to ensure the management of side effects and complications.

The initial management and continuing care of individuals with diabetes should include an assessment of their emotional and psychological well-being, together with timely access to appropriate psychological and biological/psychiatric interventions. Mental health disorders can pose significant barriers to diabetes care and therefore mental health stability is vital for good self care².

The services themselves will also have clinical oversight and accountability for governance purposes.

This contracting framework focuses on people with diabetes, including children, young people, adults and older people, who require screening and treatment for diabetic eye conditions. This contracting framework should also be read in conjunction with Commissioning Systematic Diabetic Retinopathy Screening¹ published by the English National Screening Programme for Diabetic Retinopathy and the diabetes commissioning guides for children and young people, diagnosis and continuing care, for older people and follow the principles for the effective commissioning of services for people with Learning Disabilities ³.

**Ensuring quality**

Commissioning Bodies should ensure that the diabetes eye services commissioned are of the highest quality. There may, in addition, be some organisations that wish to offer their services, but do not have a history of providing such care.

i) For provider organisations already involved in the delivery of diabetes eye services, there should be retrospective evidence of systems being in place, implemented and working.

ii) For organisations new to the arena, the commissioner should reassure itself that the provider has the organisational attributes, governance arrangements, systems and processes set up to provide the platform for safe and effective delivery of diabetes eye services.

**This framework describes what the Commissioning Body needs to ensure is present or addressed in its discussions with the provider organisation.**

Under the ‘elements’ column there are cross references to the Standard NHS Contract for Acute Services – bilateral (main clauses and schedules)⁴. (The cross references also apply to the clauses and schedules in the Standard NHS Contract for Community Services). This is to assist commissioners and providers in having an overview of how the elements link to the Standard NHS Contract. Some of the areas are open to interpretation and consequently the references are not exhaustive.

</table>
| Governance | Leadership | Cross references to the Standard NHS Contract for Acute Services  
Main clauses: 11, 16, 19, 33, 48, 49, 51, 53, 60  
Schedules: 10 | Clarity of the organisation’s purpose with explicit commitment to providing high quality services.  
A culture that demonstrates an open learning ethos.  
An organisation that is legal and ethical in all its activities. | Provider must an organisational structure that provides leadership for all professions and disciplines.  
In particular, there must be a corporate clinical director with the responsibility and accountability for the clinical service.  
There must be a learning framework in the organisation. | There should be a designated clinical director with responsibility and accountability for the diabetes and eye services. |
| Governance | Integrated Governance | Cross references to the Standard NHS Contract for Acute Services  
Main clauses: 11, 19, 27, 48, 49, 51, 53, 54, 56, 60  
Schedules: 10 | An organisation that is guided by the principles of good governance:  
- clarity of purpose  
- participation and engagement  
- rule of law  
- transparency  
- responsiveness  
- equity and inclusiveness  
- effectiveness and efficiency  
- accountability  
An organisation that accepts responsibility and accountability for all its actions. | Clear organisational and integrated governance systems and structures in place with clear lines of accountability and responsibilities for all functions. This includes interfaces and transitions between services. | Quality Governance in the NHS. A guide for provider boards |
| Governance | Clinical Governance | Cross references to the Standard NHS Contract for Acute Services  
Main clauses: 4, 4A, 6, 9, 10, 12, 14, 15, 16, 17, 19, 21, 27, 29, 31, 32, 33, 48, 49, 51, 53, 54  
Schedules: 3 (parts 1, 2, 4, 4A, 4B, 4C, 5, 6), 7, 10, 12, 18, 20 | Explicit commitment to quality and patient safety.  
Patient focused with respect for the personal wishes of patients in all aspects of their care.  
A commitment to innovation and continuous improvement. | Clinical Governance systems and policies should be in place and integrated into organisational governance with clear lines of accountability and responsibility for all clinical governance functions e.g.  
- clinical Audit  
- clinical Risk Management  
- untoward Incident Reporting  
- infection Control  
- medicines Management  
- informed Consent  
- raising Concerns  
- staff Development | All sub-contractors must meet governance and leadership arrangements of the main provider organisation.  
Commissioner, provider and NHS Litigation Authority must review the Clinical Negligence Scheme for Trusts arrangements / or other organisational / professional indemnity arrangements.  
The service should have in place written protocols and procedures defining clear lines of accountability and responsibility.  
The service is required to comply with guidelines, public health guidance and appraisals published by the National Institute for Health and Clinical Excellence that are relevant to the care provided by the service. |

| Clinical quality| Workforce/staff                                | The provider organisation has systems and procedures in place to assure the commissioner that their clinical team has the necessary qualifications, skills, knowledge and experience to deliver the service. | Staff are competent and fit for purpose. Provider to satisfy commissioner that all staff have current appraisal, clearances and registration checks and have demonstrated competence in all procedures relevant to pathway. | Provider to satisfy commissioner that they can recruit (or procure) and retain a competent clinical team to deliver the service. Specific qualifications required of health professionals providing the service are:  
- For ophthalmology medical practitioners: registration with the GMC and evidence of further qualification in ophthalmology and management of diabetic eye disease  
- Nurses: registration with the NMC and further evidence of qualification in diabetes eye care or experience within diabetes clinic  
- Screener/Graders for diabetic retinopathy screening programme: comply with qualifications as required by the English National Screening Programme for Diabetic Retinopathy  
- Optometrists: specific training in the examination of the eye using slit lamps approved by the Quality Assurance Committee of the English Screening Programme for Diabetic Retinopathy

Teams, including consultant and other health care professionals, treating patients with diabetic retinopathy should demonstrate experience in the field by having worked in a dedicated medical retina or laser clinic for at least one year. They should also attend regular case discussions and clinical audit meetings. This should include an annual review of outcomes and adverse events in the annual report. Healthcare professionals involved in delivering diabetes care are required to have the relevant competencies (see Skills for Health- Diabetes Competencies for diabetic retinopathy). |

| Clinical quality  | Patient pathway               | i) register patients  
ii) collect relevant clinical and administrative data  
iii) manage the appointment process, (reappointment and DNA process, if appropriate)  
iv) provide information to patients  
v) undertake initial assessment in the appropriate location | At point of intervention:  
The commissioner should assure themselves that the provider has systems and processes in place to ensure that:  
i) the intervention is conducted safely and in accordance with accepted quality standards and good clinical practice.  
ii) the patient receives appropriate care during the intervention(s), including on treatment review and support, in accordance with best clinical practice  
iii) where clinical emergencies or complications do occur they are managed in accordance with best clinical practice  
iv) the intervention is carried out in a facility which provides a safe environment of care and minimises risk to patients, staff and visitors  
v) the intervention is undertaken by staff with the necessary qualifications, skills, experience and competence  
vi) there are arrangements for the management of out of hours care according to best clinical practice | • it is desirable to perform laser treatment, if indicated, on the same day of diagnosis of the problem requiring treatment.  
• exit digital photographs should be taken on discharge for future reference.  
These ophthalmology services must have access to:  
• fluorescein angiography  
• optical coherence tomography  
• low vision aid services  
• counselling (for sight loss) |
|                   |                               | At exit from pathway:  
The commissioner should assure themselves that provider has systems and processes, which are agreed with all parties and networks, in place to:  
|                   |                               | • continue care/follow up  
• there should be systems in place to ensure the follow up of patients who have had eye treatment and continued monitoring of changes in the eyes  
• discharge information should be sent to:  
  o the relevant diabetes multidisciplinary team for updating of the patient's diabetes care plan  
  o the call/recall centre of the retinopathy screening programme for updating of the retinopathy screening list  |
|                   |                               | The retinopathy screening service must ensure that arrangements are made for the following special groups to have access to the service:  
• people in prisons  
• the housebound  
• people in care homes  
• people with learning disabilities  |
|                   |                               | In addition, pregnant women with diabetes (including gestational diabetes) should have:  
1. Screening for diabetic retinopathy in the preconception period  
2. Women with type 1 and type 2 diabetes should be offered two-field mydriatic digital photography to National Standards at (or soon after) their first antenatal clinic visit and again at 28 weeks’ gestation.  
3. If background diabetic retinopathy is found to be present, an additional screen should be performed at 16-20 weeks.  
4. If referable diabetic retinopathy is found to be present in early |

| Clinical quality | Estates and equipment | Cross references to the Standard NHS Contract for Acute Services  
Main clauses:  5,29, 33, 56  
Schedules:  3,10,19 | Understanding of building regulations.  
Access to advice on “fit-for-purpose” equipment and facilities. | Commissioners must assure themselves that patient care is delivered in appropriately built and equipped facilities which meet relevant HTMs and Building Notes, and, where appropriate, are registered and are safe and clean.  
Equipment must be fit for purpose.  
Commitment to efficient use and satisfactory maintenance of equipment. | Services providing retinopathy screening should procure digital fundus cameras as set out in ‘Essential Elements in Developing a Diabetic Retinopathy Screening Programme’ 29.  
The equipment to perform eye surgery should be procured according to the recommendations set by the Royal College of Ophthalmologists 27. |
| Clinical quality | Knowledge and understanding of health and safety | Cross references to the Standard NHS Contract for Acute Services  
Main clauses:  5,11, 19, 54, 56, 60 | Understanding of clinical accountabilities of health and safety policies. | Health & Safety strategy and policies in place and implemented with awareness throughout the organisation.  
Accessibility to executive responsible for Health & Safety for quicker, first contact services. | Health and safety policies as per provider agreement with commissioners. |
| Data and information management | Strategy and policies | Cross references to the Standard NHS Contract for Acute Services  
Main clauses:  8,9, 17, 19,21,23, 24,27,29,32,33,54  
Schedules:  5,7,15,16,18 | Strategy and policy development skills.  
The ability to analyse data and have access to information that can predict trends and that could identify problems.  
The ability to capture evidence-based practice from Renal & Diabetes National Service Frameworks, NICE guidance.  
The ability to use data and information appropriately to improve patient care.  
Transparency and objectivity. | The provider should have an explicit data and information strategy in place that covers:  
* types of data  
* quality of data  
* data protection and confidentiality  
* accessibility  
* transparency  
* analysis of data and information  
* use of data and information  
* dissemination of data and information  
* risks  
* sharing of data and compatibility of IT across different providers with respect to care of patients across a pathway  
This information should be included in the Data Quality Improvement Plan. | The provider is required to have information systems that record individual needs including emotional, social, educational, economic and biomedical information which permit multidisciplinary care across service boundaries and support care planning 31.  
The provider is required to collect specific data as set out in ‘commissioning systematic diabetic retinopathy screening’ 1.  
The Provider is required to use the following for the collection and production of data, where appropriate:  
* NHS Outcomes Framework25  
* National Diabetes Information Service 32  
* National Diabetes Audit 14  
* Diabetes E 17  
* Hospital Episode Statistics33  
* Patient Experience 16,30  
* Patient Satisfaction 30 |

Standard Service Specification
Template for Diabetes Eye Services

This specification forms Schedule 2, Part 1, or section 1 (module B), ‘The Services - Service Specifications’ of the Standard NHS Contract for Acute Services.

Service specifications are developed in partnership between commissioners and provider agencies and are based on agreed evidence-based care and treatment models. Specifications should be open to scrutiny and available to all service users/carers as a statement of standards that the user/carer can expect to receive.

The following documentation, developed by the Diabetes Commissioning Advisory Group and the English National Screening Programme for Diabetic Retinopathy provides further detail/guidance to support the development of this specification:

- the diabetes and eye services intervention map
- the contracting framework for diabetes and eye services

This specification template assumes that the services are compliant with the contracting framework for diabetes and eye services.

This template also provides examples of what commissioners may wish to consider when developing their own service specifications.

Description of diabetes and eye care:
Diabetes eye care includes the assessment, screening, treatment and follow up of people with diabetes to manage diabetic eye disease. This includes screening for diabetic retinopathy.

The final specification should take into account:

- national, network and local guidance and standards for diabetes and eye services including retinopathy screening.
- local needs.
- cross references to the standard service specification for retinopathy screening published by the English National Screening Programme for Diabetic Retinopathy at www.retinalscreening.nhs.uk

This specification is supported by other related work in diabetes commissioning such as:

- the web-based Diabetes Community Health Profiles (Yorkshire and Humber Public Health Observatory)
- the web-based Health Needs Assessment Tool (National Diabetes Information Service).

These provide comprehensive information for needs assessment, planning and monitoring of diabetes services.

Introduction

- a general overview of the services identifying why the services are needed, including background to the services and why they are being developed or in place.
- a statement on how the services relate to each other within the whole system should be included describing the key stakeholders/relationships which influence the services, e.g. multi-disciplinary team etc
- any relevant diabetes clinical networks and screening programmes applicable to the services, e.g. retinopathy screening
- details of all interdependencies or sub-contractors for any part of the service and an outline of the purpose of the contract should be stated, including arrangements for clinical accountability and responsibility, as appropriate

Purpose, Role and Clientele
1. A clear statement on the primary purpose of the services and details of what will be provided and for whom:
   • who the services are for (e.g. people with diabetes from age 12 upwards)
   • what the services aim to achieve within a given timeframe
   • the objectives of the services
   • the desired outcomes and how these are monitored and measured

Scope of the Services
2. What does the service do? This section will focus on the types of high level therapeutic interventions that are required for the types of need the services will respond to.
   • how the services responds to age, culture, disability, and gender sensitive issues
   • assessment – details of what it is and co-morbidity assessment and referrals to all relevant specialties
   • service planning – high level view of what the services are and how they are used; how patients enter the pathway/journey; what are the stages undertaken, e.g. retinopathy screening, diagnosis and continuing management. The aims of service planning are to:
     o develop, manage and review interventions along the patient journey
     o ensure access to other specialities / care, as appropriate
     o ensure that care planning is undertaken by the diabetes multi-disciplinary team (as defined locally) with a clear care coordination function
   • holistic review of patients in the management of their diabetes using the principles of an integrated care model for people with long term conditions that is patient-centred, including self care and self management, clinical treatment, facilitating independence, psychological support and other social care issues
   • risk assessment procedures
   • detail of evidence-base of the service – i.e. the contracting framework for diabetes and eye services, guidance produced by the Royal College of Ophthalmologists, English National Screening Programme for Diabetic Retinopathy, Diabetes UK, etc

Service Delivery
3. Patient Journey/intervention map
   Flow diagram of the patient pathway showing access and exit transfer points – see the diabetes and eye services intervention map as a starting point. See also the guidance published by the English National Screening Programme for Diabetic Retinopathy (www.retinalscreening.nhs.uk)

4. Treatment protocols/interventions
   Include all individual treatment protocols in place within the services or planned to be used

5. This will include a breakdown of how the patient will receive the services and from whom. It should be a clear statement of staff qualifications/experience and/or training (if appropriate) and clinical or managerial supervision arrangements. It should specify, as appropriate:
   • geographical coverage/boundaries – i.e. the services should be available for people from age of 12 upwards who live in the clinical commissioning group area
   • hours of operation including, week-end, bank holiday and on-call arrangements
   • minimum level of experience and qualifications of staff (i.e. doctors – ophthalmologists and GPs, Nursing staff – diabetes nurse specialists, ophthalmology nurses etc, other allied health professionals, e.g. optometrists and other support and administrative staff)
   • confirmation of the arrangements to identify the care co-ordinator for each patient with diabetes (i.e. who holds the responsibility and role).
   • staff induction and developmental training
6. Equipment
- upgrade and maintenance of relevant equipment and facilities (e.g. digital cameras, eye laser equipment etc)
- technical specifications, e.g. digital fundus cameras as set out in ‘Essential Elements in Developing a Diabetic Retinopathy Screening Programme’

Identification, Referral and Acceptance criteria
7. This should make clear how patients will be identified, assessed and accepted to the services. Acceptance should be based on types of need and/or patient.

8. How should patients be referred?
- who is acceptable for referral and from where
- details of evaluation process - Are there clear exclusion criteria or set alternatives to the service? How might a patient be transferred?
- response time detail and how are patients prioritised

Discharge/Service Complete/Patient Transfer/Transition criteria
9. The intention of this section is to make clear when a patient should be transferred from one aspect of the diabetes service to another and when this point would be reached.
- how is a treatment pathway reviewed?
- how does the service decide that a patient is ready for discharge
- how are goals and outcomes assessed and reviewed?
- what procedure is followed on discharge, including arrangements for follow-up

Quality Standards
10. The service is required to deliver care according to the standards for clinical practice set by the National Institute for Health and Clinical Excellence

11. As a minimum, the Provider is required to agree a local Commissioning for Quality and Innovation scheme for services for people with diabetes. (Insert details of the CQUIN Scheme agreed)

12. The service is required to deliver the outcomes for diabetes as determined by the NHS Outcomes Framework

Activity and Performance Management
13. This must include performance indicators, thresholds, methods of measurement and consequences of breach of contract. These will be set and agreed prior to the signing of the overall agreement.

For KPIs relating to retinopathy screening please see http://www.retinalscreening.nhs.uk/KPIs

14. Activity plans – Where appropriate, identify the anticipated level of activity the service may deliver; provide details of any activity measures and their description /method of collection, targets, thresholds and consequences of variances above or below target.

Continual Service Improvement
15. As part of the monitoring and evaluation procedures, the service will identify a method of agreeing measurements for continuous improvement of the service being offered and work to ensure unmet need is both identified and brought to the attention of the commissioner.

---

b UK National Screening Committee, Essential Elements in Developing a Diabetic Retinopathy Screening Programme, National Screening Programme for Diabetic Retinopathy Workbook 4.3, June 2009, http://www.retinalscreening.nhs.uk/workbook

c http://www.nice.org.uk/guidance/qualitystandards/qualitystandards.jsp

16. Review:
- this section should set out a review date and a mechanism for review.
- the review should include both the specifications for continuing fitness for purpose and the providers’ delivery against the specification.
- this should set out the process by which this review will be conducted.
- this should also identify how compliance against the specification will be monitored in year.

17. Agreed by:
- this should set out who agrees/accepts the specification on behalf of all parties.
- this should include the diabetes eye service providers, commissioner and network.
